

April 6, 1948.

Dr, Aaron Novick,  
Institute of Radiobiology & Biophysics,  
Chicago 37, Illinois.

Hear Aaron,

Reprints are under separate cover.

It was a pleasure to meet Jane, and to see you again. I hope our visit will not seem so short. We plan to leave Chicago by Milw Road at 2:15, arriving ( I forgot what station) somewhat after 5 on Thursday April 15. We have to catch the Pacemaker at 3:30 PM Friday. Did you say that you could arrange a bunk for us Thursday night? Send us instructions, but don't put yourselves out.

Have you had a chance to make any inquiries about lactose analogues? (B-D-galactosides, fucosides, a- or b-lactosides, etc). I don't expect there's anyone at Chicago who's ever been interested in these particular compounds. I need a good chemist to come work with me on this problem.

Best regards and see you next week,

Sincerely,

Joshua Lederberg
